

GrowStreams: Use Cases & Economics

Revenue Model

Income Streams

- 1. **Stream Creation Fees:** 0.3% of deposit → \$18K-180K/year at scale
- 2. **Vault Management:** 0.05% annual on TVL → \$5K/year at \$10M TVL
- 3. **AI Verification Service:** \$50-200/month per campaign → \$30K/year
- 4. **API/Enterprise:** \$100-500/month → \$12K/year

Total Year 1: \$65,000 (conservative)| **At Scale:** \$650,000/year

Economics: Vara vs Ethereum

Operation	Vara (GrowStreams)	Ethereum L2 (Superfluid)	Savings
Create Stream	\$0.10	\$0.80	8x cheaper
Withdraw	\$0.05	\$0.40	8x cheaper
Monthly (100 txs)	\$10	\$80	8x reduction

Receiver Advantage: Withdraw daily with minimal fees (vs waiting for monthly batch on Ethereum)

Top 5 Use Cases

1. Freelance/Gig Work (Primary)

- **Problem:** Upwork charges 20%, payment delays, disputes
- **Solution:** Per-second payment, AI verifies code commits, instant withdrawals
- **Market:** \$1.5 trillion global freelance economy

2. Open Source Bounties

- **Problem:** Manual review, subjective judging
- **Solution:** AI scores PR quality → auto-create stream if score ≥ 70
- **Example:** Hackathon with 100 submissions, top 20 get streams proportional to AI score

3. DAO Salaries

- **Problem:** Monthly batch payments = high gas
- **Solution:** Set streams once, run forever, contributors withdraw anytime
- **Savings:** \$16K/year on international payroll fees

4. Subscriptions (SaaS)

- **Problem:** Users locked in for full month
- **Solution:** Cancel anytime, instant refund of unused time
- **Market:** \$800B global SaaS

5. Creator Patronage

- **Problem:** Patreon charges 12%
- **Solution:** Fans stream per-second, creators withdraw daily

vs Superfluid

Feature	GrowStreams	Superfluid
Cost	\$0.10/tx	\$0.80/tx
Focus	Gig economy + AI verification	Salaries + DeFi
Quality Gates	AI oracle native	None
Agent Automation	Built-in	Manual only
TVL	\$0 (new)	\$50M+ (live)

Superfluid Strengths: Proven (100K+ streams), DAO adoption (Maker, Aave), 3 years live

GrowStreams Edge: 8x cheaper, AI-verified work, quality-gated payments, agent-driven

Live Projects Comparison

Superfluid (\$50M TVL)

- Maker DAO: \$2M/year streaming salaries
- Index Coop: Streaming LP rewards
- **Gap:** No work verification, manual only

Gitcoin (\$50M+ grants)

- Open source bounties, quadratic funding
- **Gap:** Lump-sum payments, manual review
- **GrowStreams adds:** AI verification + continuous streaming

Braintrust (Freelance, \$BTRST token)

- Decentralized Upwork, 10% fees
- **Gap:** Milestone-based, payment delays
- **GrowStreams adds:** Per-second streaming, <1% fees, instant liquidity

Llama Pay (Salary streaming)

- Simple per-second salaries on L2s
 - **Gap:** No work verification
 - **GrowStreams adds:** Quality-gated streams + AI oracle
-

Value Proposition

For Workers:

- Get paid per second (no 30-day wait)
- Withdraw anytime with \$0.05 fee (vs \$5-50 international wire)
- Protected by vault escrow

For Employers:

- Pay only for verified work
- Stop stream if quality drops
- 8x lower platform costs vs Ethereum solutions

For Protocol:

- Fee revenue on every operation

- Growing TVL = growing fees
- Network effects from AI oracle data
